Pred. score No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed,

> and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                      This sequence encodes a human obesity protein binding protein-2 homologue (hOB-BP2h) of the invention. The hOB-BP2h nucleic acids and polypeptides may be used for the manufacture of a medicament for the treatment of obesity and/or obesity-related disorders. The hOB-BP2h nucleic acids are useful as probes or amplification primers in the detection, quantification or isolation of gene sequences or transcripts, for recombinant expression of hOB-BP2h polypeptides, as immunogens in the preparation and screening of antibodies, and in sense or antisense suppression of one or more hOB-BP2h genes or nucleic acids, host cell or tissue in vivo or in vitro. Antigenic epitope-bearing peptides and polypeptides are useful for raising or screening antibodies that specifically binds to the hOB-BP2h polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              문
                                                                                    CC related lectin) protesn (I). Pharmaceutical compositions comprising (I)
CC are useful for treating immune system diseases such as asthma, leukaemia
CC or other allergic or inflammatory diseases. Extracellular domains of (I)
CC represent potential markers for screening, diagnosis, prognosis,
CC follow-up assays, and imaging methods. (I) is useful as a target for
CC drugs which inhibit inflammation, tissue damage and remodeling in
CC osteoarthritis, Crohn's diseases such as allergic rhinitis,
CC osteoarthritis, etc. (I) is also useful for monitoring the course of
CC disease or disorders, and for identifying agents that bind with and/or
CC molecules (II) encoding (I) are useful in diagnosis and/or prognosis
CC methods, and to detect the presence and/or amount of SIGLEC-BMS
CC (II) are useful as nucleic acid probes are useful for screening genomic
CC (II) are useful as nucleic acid probes are useful for screening genomic
CC (II) are useful as nucleic acid probes are useful for screening genomic
CC (II) are useful as nucleic acid probes are useful for screening genomic
CC (II) are useful as nucleic acid probes are useful for screening genomic
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for screening senomer
CC (II) are useful as nucleic acid probes are useful for scree
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated SIGLEC (sialic acid-binding Ig-related lectin) protein molecules useful for treating immune system diseases such as asthma, leukaemia, allergic rhinitis, psoriasis, conjunctivitis, Crohn's diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; sialic acid-binding Ig-related lectin; SIGLEC; asthma; immune system disease; leukaemia; allergy; inflammatory disease; tissue damage; allergic rhinitis; osteoarthritis; Crohn's disease; psoriasis; rheumatoid arthritis; conjunctivitis; gene; ss.

CC drigs which inhibit inflammation, tissue damage and remodeling in CC asthma; and inflammatory disease, psoriasis, rheumatoid arthritis, CC osteoarthritis, Crohn's disease, psoriasis, rheumatoid arthritis, CC osteoarthritis, etc. (I) is also useful for monitoring the course of CC conjunctivitis, etc. (I) is also useful for monitoring the course of CC disease or disorders, and for identifying agents that bind with and/or modulate the biological activity of SIGLEC-BMS proteins. The nucleic acid CC molecules (II) encoding (I) are useful in diagnosis and/or prognosis CC nucleotide sequences and/or SIGLEC-BMS proteins in a biological sample. CC (II) are useful as nucleic acid probes are useful for screening genomic clibrary to isolate a genomic clone of SIGLEC gene. SIGLEC-BMS gene copy commber is determined for detecting diseases or disorders associated with CSIGLEC-BMS transcripts or proteins. The SIGLEC-BMS antibodies are also used to detect, sort or isolate cells expressing SIGLEC-BMS proteins cand in diagnostic imaging technology. ABK43360-ABK43411 represent when a signal content of the invention. The invention relates to an isolated SIGLEC (sialic acid-binding Igrelated lectin) protein (I). Pharmaceutical compositions comprising are useful for treating immune system diseases such as asthma, leukas or other allergic or inflammatory diseases. Extracellular domains of represent potential markers for screening, diagnosis, prognosis, follow-up assays, and imaging methods. (I) is useful as a target for ins of (I) acid

The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies, AA233891 to AA234338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present

The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78997 represent PCR primers and probes used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel PRO polypeptides and polynucleotides to target bloactive molecules to specific cellular activities -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 2; Fig 92; 636pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2764 BP; 689 A; 798 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the isolation of the PRO polynucleotide sequences.

                                                                                                                                                                                                                                                                                                                                    Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR CC primers for PRO polypeptides of the invention. The sequences of the CC invention can be used to detect the presence of a tumour in a mammal by CC comparing the level of expression of a PRO polypeptide in a test sample CC of cells from the animal and a control sample of normal cells, whereby a CC higher level of expression in the test sample indicates the presence of a CC tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, CC pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human CC used to stimulate the proliferation or differentiation of chondrocyte cells. The CC stimulate the proliferation or differentiation of tumours and also CC susceptibility to tumour development, particularly adrenal, lung, colon, CC breast, prostate, rectal, cervical, or liver tumours, in mammalian CC subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             28-JUL-2000;
